

1. Virgin paper pulp imported from Japan, High Food Quality Control System
2. Virgin wood-pulp to ensure the precision and consistency of coffee extraction and keep original flavors of coffee

Mixed wood and Jute pulp can reduce costs but it makes uneven and weak fiber structure so that original flavors may get disturbed.

TIMEMORE believes better paper filters matter more than profits so we still set a similar price with competitive.

3. It's compatible for most cone shape drippers in the market
 4. Tips: saturate the dripper and then put paper filter inside with first drip around the rim of the dripper which helps perfect fit between dripper and paper filters
 5. Kindly flip the rim of paper filters with your fingers to separate them if the fibers get stuck to each other
